

# CHRONIC PELVIC PAIN:

## LAPAROSCOPIC PUDENDAL NERVE DECOMPRESSION AS NEW TREATMENT OPTION

14 January 2012, Saturday

Memorial Ataşehir Hospital / Istanbul

Dear my colleague,

Recently, in addition to cases whom we follow for chronic pelvic pain and plan treatments considering many etiological causes, we also have patients with chronic pelvic pain whom we cannot definitely diagnose despite current diagnostic facilities and who resists alternative treatment options.

In such cases with no clear benefit provided by Gynecologic and Urologic controls, one of etiological factors gaining gradual importance is the compression of pudendal nerve and the new treatment approach for this etiology is "Laparoscopic Pudendal Nerve Decompression".

Considering the meeting, we will highly appreciate your participation and we will also host Prof. Dr. Pansadoro and Prof. Dr. Disanto from Italy and Assoc. Prof. Dr. Liatsikos from Greece, all have significant positions in Laparoscopic and Robotic Urologic Surgeries. Influence of pudendal nerve in chronic pelvic pain syndrome will be discussed and technical and anatomic details will be shared in association with live operation of Laparoscopic Pudendal Nerve Decompression.

I hope the meeting will be useful for all participants, considering that the meeting is not only characterized as prudent, but it also focuses on single subject in all aspects.

Best regards,

Prof. Dr. Tibet Erdogru

### ***Prof. Dr. Vito Pansadoro***

He is among founders of "Challenges in Laparoscopy and Robotics" which has most significant and prestigious position in worldwide laparoscopic and robotic education. He defined the "transvesical laparoscopic diverticulectomy", which is particularly spectacular.

### ***Prof. Dr. Vincenzo Disanto***

He had attracted attentions in laparoscopic surgery particularly due to retroperitoneoscopic renal surgeries performed with diverse dissection techniques and importance of retroperitoneal fascial anatomies in laparoscopic renal surgery. In addition, he is co-founder of worldwide recognized meetings titled "Challenges in Laparoscopy & Robotics".

### ***Assoc. Prof. Dr. Evangelos Liatsikos***

He came to the front in world's literature particularly on extraperitoneal laparoscopic radical prostatectomy. He has remarkable experience on nephrectomy with NOTES technique and he made significant contributions to improvement of this technique.

10:00	Opening, <i>Prof. Dr. Bulent Oktay</i>
10:00- 12:00	<p><b>Live Surgery</b>  <b>Laparoscopic Pudendal Nerve Decompression and Opening Alcock Canal</b>  Moderators at Audience:  <i>Prof. Dr. Bulent Oktay, Assoc. Prof. Dr. Cem Demirel</i></p> <p>Moderators at OR:  <i>Prof. Dr. Vincenzo Disanto, Assoc. Prof. Dr. Evangelos Liatsikos</i></p> <p>Surgeons:  <i>Prof. Dr. Tibet Erdogru</i>  <i>Dr. Egemen Avci</i></p>
